

Vivinicord Chews®

All-natural triple-action dental product designed to enhance oral health.

Bacterial infections, plaque, tartar accumulation, a compromised immune system, and lack of routine dental care are the major causes of poor oral health in dogs. However, dental health issues are largely preventable.

Natural and known palatability

A unique combination of scientifically proven* natural ingredients to support oral health. The composition of the Vivinicord Chews® have demonstrated broad acceptance across a wide range of breeds

Astaxanthin, a systemic anti-inflammatory agent to combat gingivitis whilst supporting the natural immune system in dealing with infections.

Fucoidan aids in reducing oral bacteria and suppressing the formation of oral biofilms that can result in dental plaque formation.

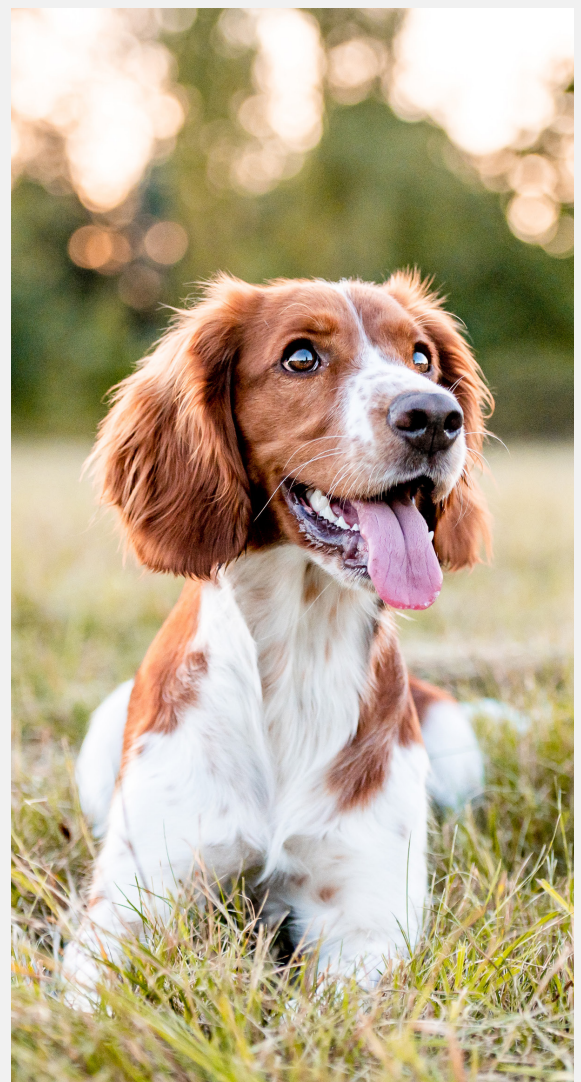

Indigo extract has a strong deodorising effect, thereby reducing halitosis or bad breath.

Fibre Blend is designed to act physically to minimise plaque and tartar build-up, support a healthy gut microbiome, and reduce the calorific density of the dental chew.

Working at both the physical and cellular level to support the fight against gum infections, deodorise the mouth, and reduce the build-up of plaque and tartar.
